March 2024

# The Narwhal List 2024

Benchmarking Canada's Scaleups

# The Narwhal List 2024

2022 was a year that many would choose to forget but 2023 was even more challenging for firms raising capital and growing revenue. Despite the challenging conditions, many Narwhals continued to make progress.

What is pleasing to see is the progress that Canada has made since 2017, the first year that the Narwhal List was published. In 2017, Canada had no Unicorns where we now have 24. The top 10 list was led by two health tech companies and they made up 50% of the top ten. There are now no health tech companies in the top 10 and that sector appears to be undergoing some strong challenges.

In 2017, we were able to identify 10 firms that were on path to becoming Unicorns. Now we not only have 24 Unicorns but there are a further 50 or so that are on a Unicorn track. Exhibit 1 shows the leading non-unicorn companies for 2023; this year there is one clean tech company among all of the computer technology companies.

| Rank | Organization Name           | Scaleup<br>Ranking | Founded | Total \$US<br>Funding | City      |
|------|-----------------------------|--------------------|---------|-----------------------|-----------|
| 1    | Waabi                       | 99%                | 2021    | 82,553,410            | Toronto   |
| 2    | Carbon6                     | 99%                | 2021    | 81,935,547            | Toronto   |
| 3    | Tailscale                   | 99%                | 2019    | 115,480,659           | Toronto   |
| 4    | CookOut                     | 98%                | 2022    | 14,000,000            | Toronto   |
| 5    | UniUni                      | 97%                | 2019    | 60,000,000            | Richmond  |
| 6    | Summit Nanotech             | 97%                | 2018    | 65,734,794            | Calgary   |
| 7    | LemFi                       | 96%                | 2020    | 33,850,000            | Toronto   |
| 8    | AutoLeap                    | 96%                | 2019    | 54,250,000            | Toronto   |
| 9    | Sanctuary Cognitive Systems | 96%                | 2018    | 89,697,338            | Vancouver |
| 10   | Doodles                     | 96%                | 2021    | 54,000,000            | Vancouver |

#### The 2023 Narwhal List Exhibit 1

The detailed lists of Canadian unicorns as well as leading companies from each of the computer, health, and clean technology sectors, follow: The complete list is also published at <a href="mailto:narwhalproject.org/narwhal-list/">narwhalproject.org/narwhal-list/</a>

# Benchmarking Canada's Scaleups

For eight years, the Narwhal Project has been benchmarking technology firms in Canada. To do this, we have identified the leading Canadian technology companies by measuring the results of all firms in Canada with greater than \$10 million of capital. The \$10 million cut-off was arbitrarily established to represent the approximate level companies start scaling. Crunchbase has records for 8,109 Canadian companies that have received more than \$100,000 of funding (up from 6,419 in 2022.) Complete data were available for 680 of these that had more than \$10 million of funding. Eight years ago, when we started this research, there were only 284 companies in our study.

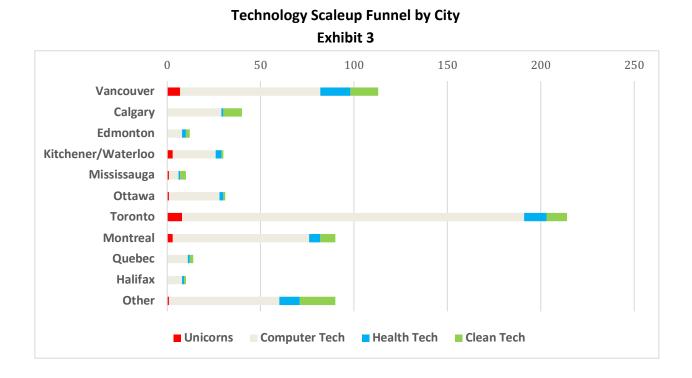

For the last few years we have been benchmarking Canadian firms against all North American scaleups. To do this we compute a scaleup ranking that compares each company to over 15,000 scaling companies in North America. The ranking for each company shows their score as a percentile against these reference companies. This ranking, which we explain in more detail later, measures each company's ability to acquire capital to fuel growth, their growth rate in personnel and how big they have become in terms of the number of employees. The final number used in ranking and ecosystem evaluation is a percentile between 0% and 100%, showing the percentage of companies that any particular company is performing better at in scaling. Exhibit 2 shows the overall summary rankings for firms in the funnel:

| Sector        | Number | Average Scaleup<br>Ranking 2022 | Average Scaleup<br>Ranking 20222 |
|---------------|--------|---------------------------------|----------------------------------|
| Entire Funnel | 680    | 48.6%                           | 49.8%                            |
| Computer Tech | 548    | 49.9%                           | 54.2%                            |
| Health Tech   | 57     | 37.0%                           | 32.5%                            |
| Clean Tech    | 75     | 45.5%                           | 49.2%                            |

#### Canada's Scaleup Funnel Exhibit 2

Exhibit 2 shows that the computer technology sector results exceed those of other industries, and the health tech sector lags behind other groups dramatically. As a group, Canadian firms did not perform to the average of North American firms and fell slightly from the prior year. While the health tech sector improved their scaling ability, computer and clean tech firms had declines in their overall performance.

It is also possible to look at this funnel in terms of location. Exhibit 3 shows the city where each member of the technology companies in the scaleup funnel is located.

Similarly, this data can be seen in Exhibit 4 by city. Mississaugonians (sp?) will be delighted to find that they lead the pack.

| City               | Number | Average<br>Scaleup<br>Ranking |
|--------------------|--------|-------------------------------|
| Mississauga        | 10     | 54.71%                        |
| Toronto            | 224    | 51.52%                        |
| Montreal           | 94     | 50.92%                        |
| Calgary            | 44     | 48.11%                        |
| Vancouver          | 113    | 48.05%                        |
| Ottawa             | 32     | 47.39%                        |
| Quebec             | 15     | 47.31%                        |
| Kitchener/Waterloo | 31     | 46.09%                        |

### Technology Scaleup Funnel by City Exhibit 4

| Edmonton | 13 | 43.35% |
|----------|----|--------|
| Other    | 93 | 40.59% |
| Halifax  | 10 | 38.42% |

Identifying which investors are backing companies in the funnel is also possible. For example, to identify leading venture capital investors, we computed the average scaleup score of each VC firm with greater than ten companies identified in the list of the top 5 investors by company in Crunchbase. Exhibit 5 shows the leading investors in the Canadian technology space.

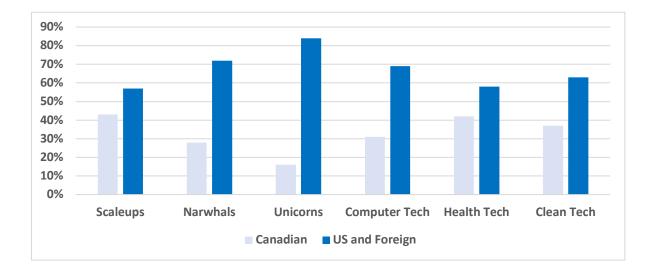

| Investor                       | Number | Average<br>Scaleup<br>Ranking |
|--------------------------------|--------|-------------------------------|
| Bessemer Venture Partners      | 10     | 64.7%                         |
| OMERS Ventures                 | 16     | 61.6%                         |
| Inovia Capital                 | 48     | 61.0%                         |
| Insight Partners               | 11     | 60.8%                         |
| Techstars                      | 10     | 58.9%                         |
| Y Combinator                   | 20     | 58.9%                         |
| Garage Capital                 | 14     | 58.6%                         |
| Real Ventures                  | 15     | 57.6%                         |
| Creative Destruction Lab (CDL) | 62     | 56.6%                         |
| White Star Capital             | 13     | 55.7%                         |

### Technology Scaleup Funnel by Investor Exhibit 5

The average scaleup ranking in Exhibit 5 isn't computing the rate of return earned by each of the VC firms identified. Instead, it measures how well the companies invested in by these VCs are scaling.

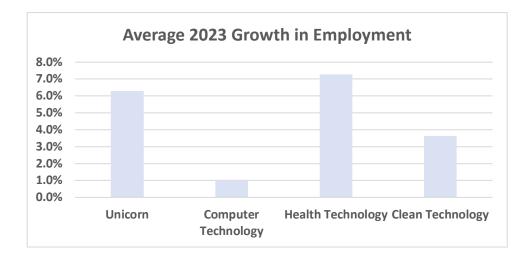

Exhibit 6 below shows the results for 2,716 investments by 1,718 investors in 687 Scaling Canadian tech companies. The investors are shown as one of the top five investors in these companies by Crunchbase. What the data shows is what the list implies, that foreign funds are dominating the Canadian investing landscape.

#### Location of Top 5 Investors Exhibit 6

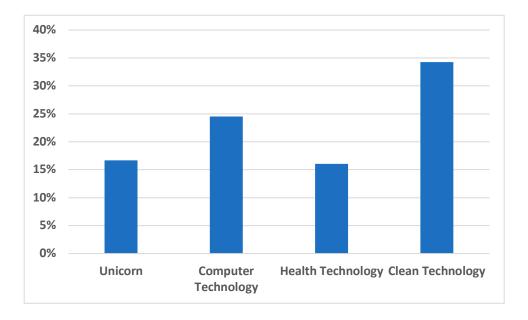

The average Canadian Scaleup grew 2.4% in terms of number of employees last year and the average growth by sector was as follows:

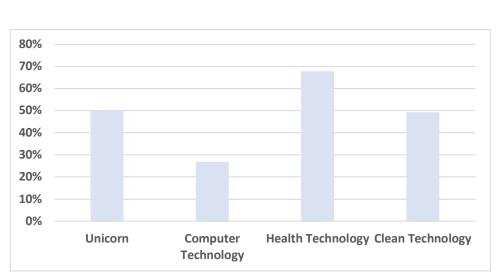

We can also look at the percent of firms getting funding in 2023.

### Percent of Firms Getting Funding Exhibit 8

Finally, because the government seems to be obsessed with firms getting patents, we have calculated the percentage of Narwhal List firms (not all scaleups) that have patents.

#### Percent of Narwhals with Patents Exhibit 9

Having looked at the scaleup funnel, we can then turn to identify those firms at the top of the funnel.

### Unicorns

It is hard to believe Canada had only three Unicorns in 2020. We are now up to 24 of them, creating five more in the last year.

### Unicorn Statistics Exhibit 10

| Unicorns              | 2023        | 2022          | 2021          | 2020       |
|-----------------------|-------------|---------------|---------------|------------|
| Number of Unicorns    | 24          | 19            | 17            | 3          |
| Number raising funds  | 4           | 11            | 17            | 1          |
| Amount raised         | 325,000,000 | 1,494,157,850 | 3,290,659,000 | 70,000,000 |
| Average amount raised | 81,250,000  | 135,832,532   | 219,377,000   | 70,000,000 |

### Canadian Unicorns Exhibit 11

| Rank | Organization Name | Scaleup<br>Ranking | Founded | Total \$US Funding | City        |
|------|-------------------|--------------------|---------|--------------------|-------------|

# Computer Technology

Canada's computer tech Narwhals continue to make progress. While investing markets were challenged in 2023, 22 computer tech firms raised new funding, although at a much lower average per company than in the past.

### Computer Technology Statistics Exhibit 12

| Computer Tech         | 2023        | 2022          | 2021          | 2020        |
|-----------------------|-------------|---------------|---------------|-------------|
| Number raising funds  | 22          | 24            | 33            | 15          |

# Health Technology

Canada's health technology sector continues to be rebuilding, with three Narwhals raising funds although at a much lower scale. Scaleup rankings for the sector are considerably below that of the computer and clean technology sectors.

#### Health Technology Statistics Exhibit 14

| Statistics            | 2023       | 2022       | 2021        | 2020        |
|-----------------------|------------|------------|-------------|-------------|
| Number raising funds  | 3          | 1          | 6           | 5           |
| Amount raised in 2019 | 20,000,000 | 39,500,000 | 535,711,000 | 194,100,000 |
| Average amount raised | 10,000,000 | 39,500,000 | 89,285,000  | 38,820,000  |

# Clean Technology

This sector is slightly different from other sectors as it is comprised not just of product companies but of companies such as Enerkem, which transforms waste into transportation biofuels, renewable chemicals, and everyday products, as well as others such as Westgen Technologies, which is a remote power generation company. This sector raised substantially less per firm in 2023 as well.

# Background and Methodology

The objective of the Narwhal List is to identify those Canadian companies experiencing success at scaling up. We have used publicly available data to assess firms' scaling ability so that any firm anywhere can be rated similarly. We have used statistics relating to growth, capital, and size as follows:

- 1. **Employee growth** has been measured by the increase in the number of employees over the last two years. While using revenue growth rates would be preferable, as a proxy, we have used LinkedIn data on employment growth for this analysis.
- 2. The company's **Financial Velocity** equals the total cash raised divided by the years. For the purpose of this analysis, we have used Crunchbase data.
- 3. The company's **size** is measured by the number of employees available on LinkedIn.

Measurements for these three data points are then compared with the data from over 15,000 North American firms that are also scaling. For each data point, a percentile ranking is computed, the three rankings are averaged, and an overall scaleup ranking is determined.

This Scaleup ranking can be used in several ways:

- To determine a firm's competitiveness when it is seeking capital.
- To quickly assess firms in a portfolio
- To compare firms to each other.
- To assess a firm's progress over time.

To accumulate the data used to prepare these lists, a search was performed on Crunchbase and LinkedIn. Companies had to be active and private in a technology business headquartered in Canada to be eligible. The investigation identified those companies on Crunchbase with over \$10 million of capital.

# About the Narwhal Project

We help companies figure out how to scale efficiently. Working at the intersection of strategy, marketing and finance we provide companies with the analytical tools to make strategic decisions that will fuel efficient growth. We help them figure out the best markets to serve, how to differentiate effectively, ensure product market fit, improve unit economics and raise capital. The Narwhal Project was also established to research the underlying factors essential to creating world-class technology companies. Our objective is to understand how companies can accelerate their growth and how governments, companies, and academia can identify and adopt best practices in technology commercialization.

#### **Charles Plant**

Founder cplant@narwhalproject.org

Charles Plant is a serial entrepreneur and scaleup economist. He was co-founder and CEO for 15 years of Synamics, a telecommunications software firm. Charles has been a co-founder of four, Board Chair at four and CFO of more than a dozen emerging technology companies. He has worked on financing and M&A transactions in investment banking, on the management committee and CFO of three venture capital firms, and as an advisor at several incubators. Charles has also served as an advisor to national, provincial and city governments on innovation policy. As an educator, Charles spent seven years on the faculty of York's Schulich School of Business teaching in the MBA program and has taught innovation and entrepreneurship at the University of Toronto. He has an MBA in marketing, a PhD in Economics and is a CPA/CA.
